INTERNATIONAL BUREAU RELEASES 1999 YEAR-END CIRCUIT STATUS REPORT FOR U.S. FACILITIES-BASED INTERNATIONAL CARRIERS, REFLECTING NEARLY DOUBLED TOTAL CAPACITY USED

Washington, DC – The FCC International Bureau today released the 1999 year-end circuit status report, which reflects a continued shift from International Message Telephone Services (IMTS) to International Private Line usage.

The report covers U.S. international facilities (undersea cables, satellites, and terrestrial links) and identifies the activated (in-service) and idle circuits for each international point as of December 31, 1999. The report also includes data from 1996 to 1998 for all international points by transmission facilities.

The report indicates that the number of activated 64 Kbps equivalent circuits at year-end 1999 was 906,898, a 95% increase from 1998, the highest single year rate of growth of capacity used since the Commission began collecting such data in 1995. By service type, IMTS accounted for 34% of the total circuits used; International Private Line Services accounted for 62%; and the remaining 4% of total circuits were used for Video and other data services (outside of traditional private line services). The ratio of IMTS to private line services has continued to decrease from 1.4 in 1996, to 1.2 in 1997, to 0.8 in 1998, and to 0.5 in 1999.

By transmission type, undersea cables account for 57% of total activated circuits, an increase of 3% from 1998; terrestrial links account for 36%, a decrease of 2% from 1998; and satellites account for 7% of the total activated capacity, a decrease of 1% from 1998. The top 30 destinations among all international routes account for 94% of the total activated circuits. The percentage of idle circuits as compared to the total circuit capacity (active and idle) decreased from 43% in 1998 to 28% in 1999.

The report is available for reference in the FCC's Reference Information Center, Courtyard Level, 445 12th Street, SW, Washington, D.C. Copies may be purchased by calling International Transcription Services, Inc. (ITS) at (202) 857-3800. This report can be downloaded from the International Bureau home page (www.fcc.gov/ib/td/pf/csmanual.html) on the World Wide Web. Inquires and submissions should be directed to Cathy Hsu, Telecommunications Division, International Bureau, at (202) 418-2114.

INTERNATIONAL BUREAU

REPORT

1999 Section 43.82 Circuit Status Data

December, 2000

Cathy Hsu

Telecommunications Division

1999 Section 43.82 Circuit Status Data

Introduction

This report contains information on U.S. international facilities-based carriers' circuits as of year-end 1999 that was submitted to the Federal Communications Commission (Commission) by U.S. carriers pursuant to Section 43.82 of the Commission's rules.¹ In addition, this report uses data taken from previous reports covering 1996 through 1998. Section 43.82 directs facilities-based carriers to file an international circuit status report by March 31 each year for circuits used to provide international services as of December 31 of the preceding year. The detailed filing requirements are set forth in the Manual for Filing Section 43.82 Circuit Status Data that can be found on the International Bureau's Web site at "<http://www.fcc.gov/ib/td/pf/csmanual.html>".

The information provided herein is compiled in an aggregated form designed to be useful to current industry members, potential new entrants, and the Commission. In addition, this annual circuit status report serves as a database for determining and monitoring the payments that the Commission is required to collect (*i.e.*, annual regulatory fees on active equivalent 64 Kbps international circuits).

Reporting Requirements

All U.S. international facilities-based carriers are required to file circuit status information, reflecting both activated (in-service) and idle capacity.² Although units of circuit capacity have increased to E-1 and STM-1 levels, all services are reported in 64 Kbps equivalent circuits because regulatory fees on active international circuits are collected on that basis.

The Commission's manual on filing circuit status reports defines international facilities-based circuits as "international circuits in which a carrier has an ownership interest which includes outright ownership, indefeasible right of use (IRU) interests, or leasehold interest in bare capacity in an international facility, regardless of whether the underlying facility is a common or non-common carrier submarine cable or an INTELSAT or other satellite system." This definition is consistent with the definition of "International facilities-based carrier" contained in Section 63.09 (a) of the Commission's rules.³

This report includes both circuits from U.S. domestic points to foreign points and circuits from U.S. points to offshore U.S. points. United States and foreign points are identified in the Common Carrier Bureau Industry Analysis Division report titled *International Points used for FCC Reporting Purposes*

¹ 47 C.F.R. Section 43.82.

² If carriers do not have any activated circuits at year-end, they are still required to file a letter stating they do not have any active circuits. See Annual International Circuit Status (and Addition) Reports Due On March 31, Public Notice, DA 00-525 (rel. Mar. 9, 2000).

³ 47 C.F.R. 63.09 (a).

(*International Points*), released April 1, 1994.⁴ U.S. domestic points are the 50 states, the District of Columbia, and Puerto Rico. Foreign points include ships operating in international waters, as well as foreign destinations. Offshore U.S. points include U.S. territories such as American Samoa, Guam, Baker Island, Howland Island, Jarvis Island, Johnston Atoll, Kingman Reef, Midway Atoll, Navassa Island, the Northern Mariana Islands, Palmyra Atoll, the U.S. Virgin Islands, and Wake Island.

The *International Points Report* uses the following regional codes:

Region	Code
Western Europe	1
Africa	2
Middle East	3
Caribbean	4
North and Central America	5
South America	6
Asia	7
Oceania	8
Eastern Europe	9
International Water Area	10

The services that are covered by this report include International Message Telephone Service (IMTS) (switched voice), International Private Line Service (IPLS) (including voice and data) and Miscellaneous or Other International Services (include any Non-Private Line data service and video).

Data Presentation

Table 1 lists 162 carriers that filed circuit status reports, a 13% increase from 1998's 143 filing entities. Seventy-five carriers filed with active or idle capacity; the remaining 87 carriers did not have active or idle capacity in 1999. Among the filings, the three largest carriers - AT&T, WorldCom, Inc. and Sprint Communications Company L.P. - have requested confidentiality under the Freedom of Information Act. In addition, eleven other carriers also requested confidentiality. As denoted in Table 1, these carriers' reports are not available to the public. Our aggregated data, as listed in this report, however, reflect all of the carriers' information, including information by those carriers asking for confidential treatment.

⁴ See http://www.fcc.gov/Bureau/Common_Carrier/Reports/Fcc-State_Link/intl.html.

Table 2 through 5 presents four years of available data (1996 through 1999)⁵ for each category of transmission facility. Table 2 presents undersea cable circuit status; Table 3, satellite; Table 4, terrestrial;⁶ and Table 5, the combined transmission circuits. All tables include information organized by service type for 1996, 1997, 1998, and 1999 data.

As Table 2 shows the undersea cable circuits account for 57% of the overall active transmission capacity in 1999, an increase of 3% from 1998. Table 3 shows that the international satellite circuits account for 7% of overall transmission capacity, compared to 8% in 1998. As Table 4 demonstrates, terrestrial links account for 36% of 1998 active circuit capacity, a decrease of 2% from 1998.

Table 5 combines all three transmission media. A service mix by region from 1996 to 1999 is calculated in the last page of Table 5. For 1999, IMTS circuits accounted for 34% of the total active capacity. This figure represents a continued drop in capacity use for IMTS, from 57% in 1996, 53% in 1997, and 44% in 1998. IMTS active circuits, however, increased by 52% from 1998 to 1999. Private Line and other Data services show a strong growth in 1999. There are only two regions – Caribbean and Eastern Europe – in which the number of activated IMTS circuits exceeded 50% of their total circuits. The growth rate of private line circuits was 122% from 1998 to 1999, as compared with an increase of 63% from 1997 to 1998. This year, carriers reported many more circuits under Other Services, basically from non-private line data services, thus showing a 450% growth from 1998 to 1999.

Table 6 lists the top 30 destinations that account for 94% of the total U.S.-activated circuits at year-end 1999. United Kingdom, Canada, Mexico, Japan, and Germany remain the top five countries. The United Kingdom replaced Canada as the first among the top five countries. Previous years' top 30 ranking orders are also presented in the table for comparison. Denmark, India, and Egypt are new among the top 30 destinations in 1999, replacing Ireland, Belgium, and Portugal. Only seven of the top 30 destinations experienced heavier capacity use on IMTS than on private lines and other data services in 1999. The ratio of IMTS to private line services has continued to decrease from 1.4 in 1996, to 1.2 in 1997, to 0.8 in 1998, and to 0.5 in 1999. The ratios of IMTS to private line services for the top 30 destinations, as well as for each region, are also listed in Table 6.

Supplementary Data

Table 7 lists all operational Trans-oceanic fiber optic cables in 64 Kbps units, and planned new cables whose applications have been submitted to the Commission (both granted and pending cable applications) over time, from 1988 to 2002. The total construction cost of each cable (if available) is also included in Table 7 for further reference. In 1999, the combined cable capacity (activated and idle circuits) reported by U.S. carriers for the Trans-Atlantic region was 500,280 64 Kbps circuits (Regions 1, 2, 3 and 9); this accounts for 25.7% of the total available fiber optic cable capacity (as of December 31, 1999). For the Americas region (Regions 4, 5 and 6), U.S. carriers reported cable capacity accounting for 19% of the total available fiber optic cable capacity. For the Trans-Pacific region, the

⁵ Due to the page size limitation of this Report, all data for 1995 were omitted from this Report, but are available in our previous reports which can be download from our website <http://www.fcc.gov/ib/td/pf/csmanual.html>.

⁶ Terrestrial circuits include circuits carried by both microwave facilities and by terrestrial cables. Terrestrial circuits do not include circuits carried by undersea cables.

reported cable capacity accounts for 11.3% of the total available fiber optic cable capacity, as of December 31, 1999.

Note that cable capacity reported here likely understates the actual amount of capacity that is in use. For example, this year's reported cable capacity (activated and idle combined) is relatively small, only accounting for 20% of total available (in operation) cable capacity. Due to the reasons cited in the footnote,⁷ we recognize that there might be substantial amount of cable capacities that are in use but were not covered in our report. This discrepancy could also apply to satellite capacity since many private satellite operators are marketing their capacity directly to end-users and were not subject to our reporting requirements.⁸ Table 7 also demonstrates the trend that most of the newly activated fiber optic cables and especially the cables planned from 2001 and 2002, even with their initial capacity before reaching maximum potential capacity, have far larger capacities than the older existing cables.

⁷ In the past, we have identified two reasons that caused the discrepancy between reported capacity versus available capacity. One was foreign carriers' holding of the U.S. half of international cable capacity, about 20 to 25% of any particular cable system. Those foreign carriers are not required to report their capacity under Section 43.82 unless they use their capacity for the provision of U.S. international service. The other reason was the time-delay for country-specific information for any new cable system. That could have caused another 30-40% of capacity to be under-reported. However, there is third reason, which could cause a high level of unreported capacity. Under our Section 43.82, only common carriers are required to report the use of their international facility. There are increasing numbers of new non-common carrier cables being built and much of the capacity on those private cables was sold to end users, such as Internet Service Providers (ISPs) or to foreign carriers. Under those circumstances, neither cable owners nor cable users were required to report those capacities used. For example, in 1999, approximately 70% of total available capacity are from non-common carrier cables (see Table 7).

⁸ The calculation for total U.S. satellite available capacity is different from the calculation for total U.S. available cable capacity. Due to the flexible nature of satellite coverage, each satellite can cover various countries and can be available to all those countries within its footprint. Therefore, there is no way of calculating the fixed amount of capacity that can be allocated to any given country at any specific time frame. On the other hand, fiber optic cables are fixed because they deployed only to their planned cable stations, therefore, it is possible to calculate the total cable available capacity on a particular route at any given time frame.

* Due to the large amount of data circuits that were reported under "Other Services" in 1999, it is more appropriate to include "Other Services" under this split calculation and include it in the denominator as a proxy for the voice/data split. For other years, the split calculation only used "IMTS/PL", other services were not in the denominator.

(8) Non-Common Carrier Cables as % of total capacity = (5)/(4)										22.5%	13.8%	21.8%	34.5%	70.2%	80.6%	91.3%	93.4%

* Class : "C" = Common Carrier Cable, "NC" = Non-Common Carrier Consortium Cable, and "P" = Private Cable.

** CANTAT-3 is a Canadian cable. Because there is little information on the U.S. carriers' ownership, we excluded CANTAT-3 in our total reported % calculation.

*** Americas I and Columbus II have common segments from Florida to U.S. Virgin Islands at 60,480 circuits capacity. These large common segments are designed for back up purposes. From U.S.V.I. landing point and beyond, Americas I has 22,680 circuits to its South American destinations. Columbus II has 15,120 circuits to its European destinations. For the purpose of calculating available capacity for Americas and European regions, we decided to use the most reasonable capacity of 22,680 and 15,120 for Americas I and Columbus II respectively. We have revised Columbus II capacity from 22,680 to 15,120 circuits in this year's report.

**** Taino-Carb cable only connects from Puerto Rico to the U.S. Virgin Islands and British Virgin Island (basically serves as a hub). We therefore excluded this cable in our reported % calculation.

Conversion Ratio Used:

1 E-1 Circuit	= 30 64 Kbps Circuits
1 DS-3 Circuit	= 21 E-1s = 630 64 Kbps Circuits
1 STM Circuit	= 3 DS-3s = 63 E-1s = 1,890 64 Kbps Circuits
5 Gbps	= 2,016 E1s = 60,480 64 Kbps Circuits
10 Gbps	= 4,032 E1s = 120,960 64 Kbps Circuits

Table 7 - Data sources:

Cable capacity numbers are extracted from the FCC Cable Landing License Orders or pending Applications (see the following details). For construction costs, some numbers are available in their License Order, others are available at each project's website, as cited below.

* Level 3 and Global Crossing will jointly build the original granted Level 3 cable. Global Crossing's portion of the cable (50% of the total capacity) will be called "AC-2".

Table 7 - Data sources:

Cable capacity numbers are extracted from the FCC Cable Landing License Orders or pending Applications (see the following details). For construction costs, some numbers are available in their License Order, others are available at each project's website, as cited below.

* OXYGEN (USA) and AmeriCan-1 cable systems, two projects that have not started construction, have been deleted from this Table..

Note: All future cables' capacity are based on the information available at the time of the planned cables' filing (and subsequent updates). These estimates, however, are subject to change.

In order to be conservative, we listed only initial capacity for all future cables in this Table. However, the full potential capacity of each cable is listed below for further reference.

	Cable System	Initial Capacity (in Gbps)	Potential Max Capacity (Gbps)
